View or update the account information of the current user.
Provide authentication information for terminal players to access VNNOX Standard/AD and iCare.
Users are the people who access the VNNOX system.

- Functionality permissions: Assigning one or more roles to a user can limit the user to the corresponding permissions of the assigned role(s).
- Data permissions: Specifying a workgroup for a user allows the user to modify and delete the data in the workgroup and its sub-workgroups only, and only to view and use the data shared from other workgroups.

Users add the information and logos of their own companies to customize VNNOX.
