

## 4.3 System Settings

### Application Scenarios

Specify applications you want to enable, including VNNOX Standard, VNNOX AD and iCare.

### Operating Procedure

Step 1 From the navigation bar on the left, choose **System Settings > Application Configuration**.

Figure 1 Application Configuration

#### Application Configuration

**Application Configuration**

Select Applications to enable

Application	Status	Description
VNNOX Standard	<input checked="" type="checkbox"/>	Universal content publishing and terminal management, complete functionality and
VNNOX AD	<input checked="" type="checkbox"/>	Friendly design for advertisers' habits, flexible role and permission
iCare	<input type="checkbox"/>	All-round screen monitoring and timely email notifications, remote real-

[Save](#)

Step 2 Select or deselect application names.

- The **Default System** module in **Basic Info > Personal Settings** only includes system management and the enabled applications.
- When creating a role, you need to configure the system permissions and permissions of the enabled applications.
- Deselecting an application will clear all its permissions assigned to roles.

Step 3 After the settings, click **Save**.

### Application Scenarios

Customize VNNOX by setting the URL, name, copyright, logo, etc.

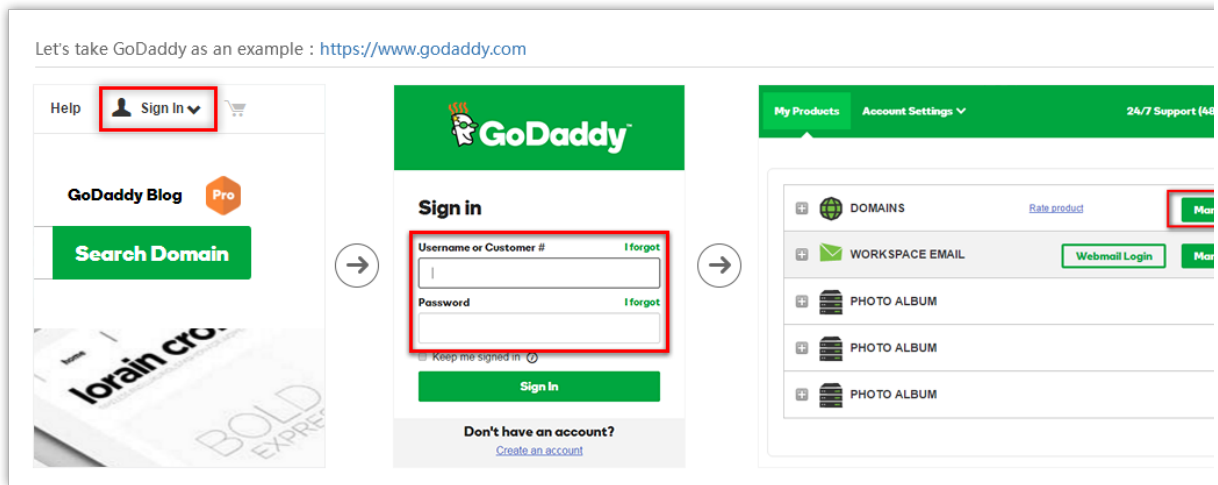

### Related Operations

Before customizing a domain name, please ensure that you own the domain name and have the domain name successfully filed in the Ministry of Industry and Information Technology of the People's Republic of China.

Alibaba Cloud filing service: <https://beian.aliyun.com>

Below is the procedure to customize a domain name in GoDaddy.

Step 1 Visit the website of your domain name provider, sign in to your account and enter the domain name management control (or control panel, user center, etc.).

Step 2 Click the domain name to access the configuration page.

Step 3 Add a parsing record and save the configuration.

- Record type: CNAME
- Host: @
- The record value is based on your node.

China: [cname-cn.vnnox.com](#)

US: [cname-us.vnnox.com](#)

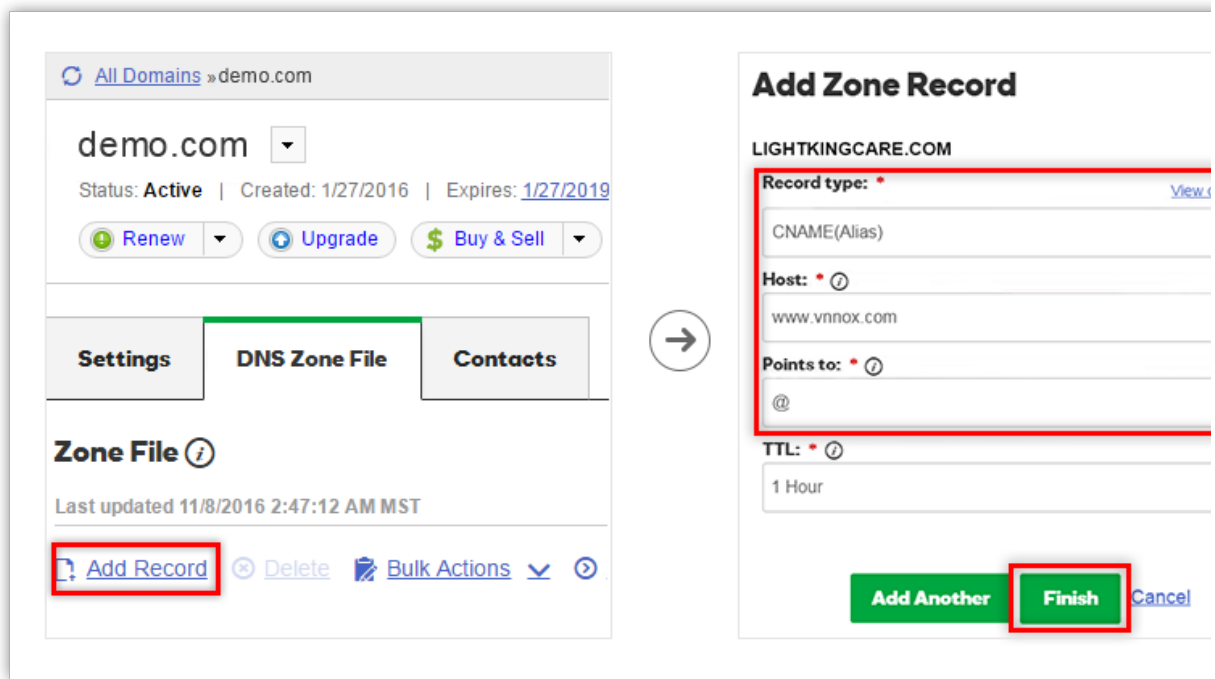

Japan: [cname-jp.vnnox.com](#)

Europe: [cname-eu.vnnox.com](#)

India: [cname-in.vnnox.com](#)

Australia: [cname-au.vnnox.com](#)

If you want to use the second-level domain name of the current domain name, fill the second-level domain name in the **Host** field.

## Operating Procedure

Step 1 From the navigation bar on the left, choose **System Settings > Custom Domain Name**.

Step 2 In the **Style** area, select a theme for the navigation bar and set an enterprise logo.

Step 3 Select **Custom System** and set a domain name, system name, and copyright information.

Step 4 Click **Advanced**, choose to show or hide the registration entry, and set a browser tab icon and contact information.

If **Registration Entry** is selected, the registration entry will be shown after the user logs in to the customized system, otherwise, it will be hidden.
