

## 6.3 SNMP References

### Related Information

The Taurus series multimedia players can connect to customers' network management system via SNMP, allowing customers to manage and monitor the Taurus and obtain device information, Ethernet port status and quantity, status and quantity of the receiving cards loaded by each Ethernet port, hardware monitoring data, average receiving card temperature, etc.

After using MIB Browser to simulate the control computer and connecting it to the Taurus, you can test SNMP GET, SET and TRAP data.
